
New **BIGFOOT LH 19E** Rotary Polisher

Power and high performance with an exclusive design

RUPES has expanded their BigFoot product range with the addition of the new **LH 19E Rotary Polisher**.

Featuring a high torque motor, compact design, premium ergonomics and a lightweight housing, the LH 19E is one of the most capable and maneuverable rotary polishers on the market. Its lightweight and powerful design makes it the ultimate rotary polishing solution for a variety of industries including Automotive Detailing, Collision repair and Refinishing, Marine, and more.

An innovative **anti-vibration loop handle**, included as the standard configuration with the LH 19E, allows users to hold the polisher securely at different angles, for precision and stability during the polishing process. The soft grip material and the

unique design absorb and dissipate vibration to improve operator comfort, as well as protect delicate surfaces from damage.

The polisher can also be equipped with a **soft grip side handle**, that reduces vibration during the polishing operation and provides comfortable control of the polisher. It enables optional right or left side grip and a higher level of operator comfort for operators who prefer a side grip.

An electronic **RPM controller** with torque recovery keeps the rotation speed constant even under varying loads making sure the entire polishing process is smoother, uniform and more effective.

LH 19E rotary polisher is equipped with a **progressive trigger** that allows the operator to make fine adjustments of speeds without interrupting work flow. The trigger, together with a new, larger **electronic control dial**, ensures the operator can deliver the right speed with accuracy.

The hassle of extension cords often causes interruption to the polishing process and can limit operator maneuverability in confined spaces. This is why RUPES has included a long cord, 9 meters, as standard with the LH 19E rotary polisher. By eliminating the need for extension cords in many applications operators can enjoy increased efficiency and less hassle.

The new polisher can be used in combination with 3 different types pad diameters, 125 , 150 and 165mm, making it versatile and adaptable to almost any polishing process in any number of industries. The new backing plate system, developed and manufactured in house by RUPES, features the ideal balance of stability and flexibility for rotary polishing.

As with all the BigFoot tool line, the new BigFoot LH 19E rotary polisher is offered as a complete polishing system, including three different of foam grades, from coarse to

the ultra-fine, and related abrasive compounds. Each component of the system has been carefully considered, engineered, and tested to work ideally with the very specific rotary movement of the LH 19E and provide optimal performance.

Thanks to its high torque, compact design and light weight, LH 19E Rotary Polisher ensures the maximum power in every polishing operation and proves once again that RUPES is the industry authority on surface preparation and restoration.
